**Step 1:** Excavate two 10" diameter holes, 36" deep, and 25.5" on center at the installation location. Contractor can modify Post to desired height. Post Length = Frost Depth (36" Recommended) + Finished Post Height

Finished Post Height Guideline: (Ages 3-5, 22") (Ages 5-7, 27") (Ages 7-11, 32") (Adult, 36")

Step 2: With two people, lower the Posts with the Instrument attached into the excavated holes.

**Step 3:** Verify the correct placement, levelness, and finished height of the Instrument. Check for sufficient clearance around the Instrument, a 36" perimeter around the Instrument is recommended for wheelchair accessibility.

**Step 4:** Last pour concrete around the posts. It is recommended to brace the Instrument to hold it rigid while the concrete cures. Leave to set according to the concrete manufacturers guidelines. Approximately (6) 80lb. bags will be needed.

**Step 2:** Determine installation location. Verify concrete footing is a minimum of 48" long x 24" wide x 6" thick. If the concrete pad is at an angle, steel washers are required to act as shims (Shims not provided). If there is not already an existing pad, approximately (7) 80lb. bags will be needed. Allow concrete to cure per concrete manufacturers guidelines.

**Step 3 (Recycled Post Only):** Install the Surface Mount Bases to the bottom of the Posts. Align the holes on the Bases with the holes on the Posts. The Bases should fit snuggly around the Posts. Fasten them together with the provided 5/16" Hex Head Lag Bolts.

**Step 4:** With two people place the Instrument Assembly with Posts attached onto the concrete pad and mark the center of the holes on the surface mount bases. After you have made your marks, set aside the Instrument in order to drill for anchor holes. With a hammer or rotary drill, drill through concrete at marked locations. Drill to a minimum depth of 4". A 3/8" masonry drill bit will be needed.

**Step 5:** Place the Instrument back over the drilled out holes. Insert provided anchor bolts into aligned holes. Position anchor nut so that it is flush with the top of the bolt. Pound anchor bolts into the hole until the anchor washer is flush with the surface mount bases. Tighten anchor bolts until they are snug. Cover remaining bolt sections with provided nut caps.
